Anesthesia safety is always the first concern for veterinarians and pet owners. But it is facing higher requirements and new challenges nowadays.

The Veta series anesthesia machine introduces cutting-edge technology, combined with advanced clinical practice. It brings a brand new working experience of veterinary anesthesia with its intelligent ventilation mode and integrated design concept, to ensure the safety of animals and veterinarians.

## Safety Renovating

Intelligent ventilation mode tailored for animals

### Complete display of patient status

- Comprehensive monitoring, complete display of patient status
- Sidestream CO<sub>2</sub> monitoring optional, ensuring safe anesthesia

### More security measures

#### Auto system leak test

- Graphic guidance
- One-key startup

#### Reminder of gas filter canister replacement

- Accurate calculation of agent absorption, matching different canister
- Automatic reminder to change canister, more worry-free

#### Multiple types of waste gas scavenging system

Gas filter canister

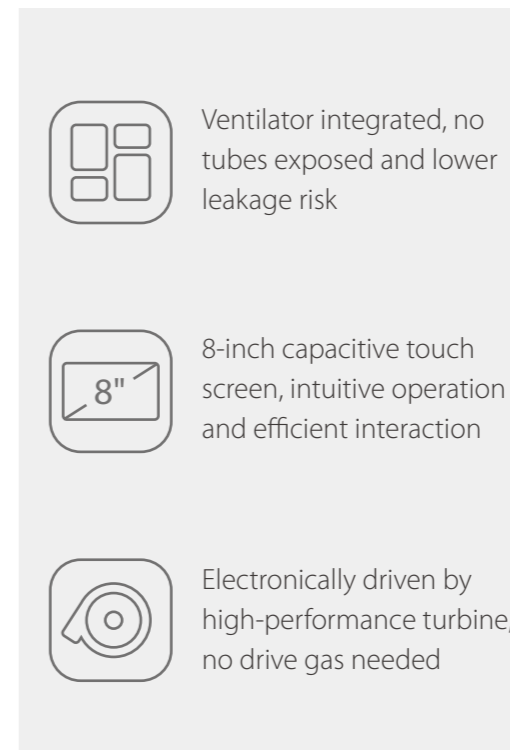

Passive AGSS

Active AGSS

## Form Refreshing

Integrated design, creating a simple and comfortable operating space

### Flexible workstation

Multiple mounting solutions for patient monitors, pumps and oxygen generators, improving the space utilization.

### Modular Upgrade

Upgrades could be realized from Veta 3 to Veta 5, adding ventilators and providing more possibilities.
